

automist

Intelligent fire suppression using less water

Whether your jurisdiction mandates fire sprinklers or you want to add a life-saving upgrade to your home. Automist can protect homes that are usually unprotected because it works with a standard water main, **avoiding expensive water supply tap fees** and using 90% less water. It detects fire earlier and activates faster, delivering better outcomes for people and property.

best of the best

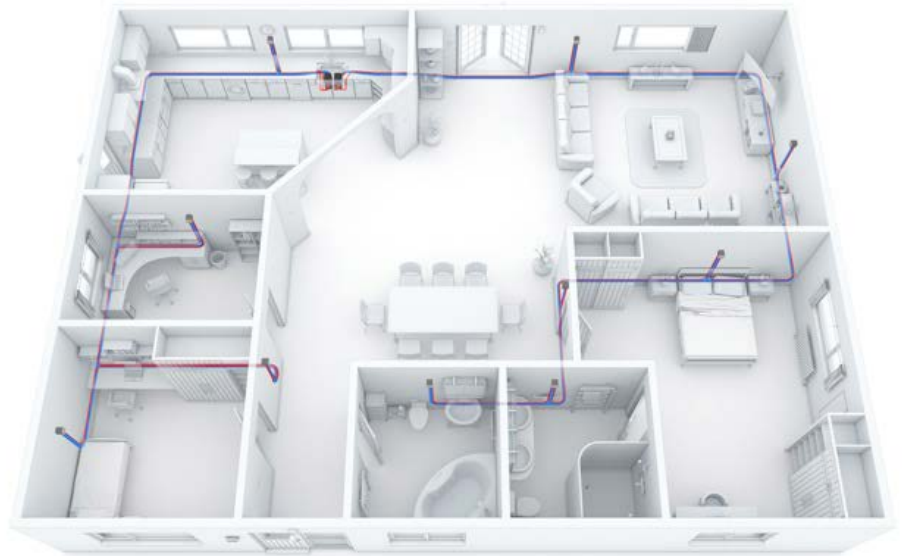

Affordable and hassle-free installation

Automist® connects to the normal domestic water supply so there is no need for a tank or costly water supply upgrade. A small pump is connected to wall mounted sprayheads which are located throughout the property.

The use of flexible high pressure hoses, which do not need to go through the ceiling makes installation easy, minimising disruption to the fabric of the building.

It's simple design means it can be installed in as little as a day and is ideal for 13D applications and ADUs.

Why Choose Automist®?

Intelligent

Rapid activation for enhanced life protection. Independent tests have shown that Automist® can activate 2-14 times faster than a conventional sprinkler.

No Tap Fee

Automist® uses less water and can connect directly to the standard water main avoiding an expensive tap or meter fee, whilst minimising the chances of water damage.

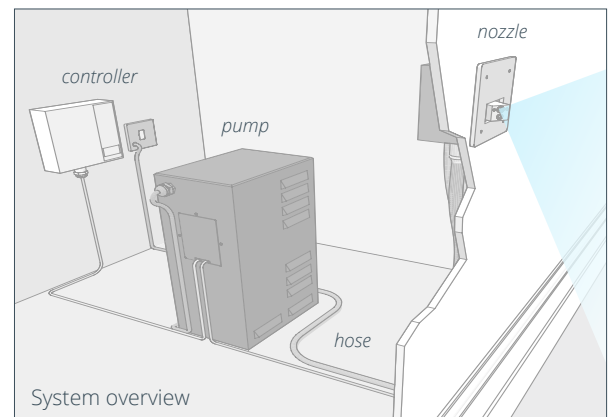

Discreet

With its award winning design, Automist® is easy on the eye and can be customised so it blends seamlessly and discreetly with your home's interior.

Dry System

Automist® does not require a tank and is also a dry pipe system until activation, eliminating the risk of leaks, freezing and making it the perfect solution for areas prone to seismic activity.
