

HOW TO BECOME AN AUTOMIST INSTALLER?

Ensuring that installers are well-trained and knowledgeable about both the Automist system and its proper installation is crucial for achieving optimal performance and compliance with safety standards.

According to NFPA 750, all water mist fire protection systems must be installed following the manufacturer's design, installation manual, and specific certification requirements. This ensures that all installations meet approved configurations, maintaining system effectiveness and safeguarding property and lives.

Certification Process Through the Plumis LMS

All training and certification are administered through the Plumis Learning Management System (LMS), available here:

Plumis LMS Portal
<https://usa-plumis.talentlms.com/index>

The certification process is simple and consists of two core steps:

1) Online Awareness Training

This self-paced course provides a foundational understanding of Automist's core concepts:

- General Awareness – Learn the system's basic principles and applications.
- Installation & Commissioning – Understand best practices for installing and setting up Automist.
- Design and Estimating – Learn how to design systems and estimate project requirements.

2) Hands-On Practical Assessment

After completing the awareness training, you'll participate in a half-day practical session with an expert instructor. During this session, you will:

- Install and commission an Automist system
- Troubleshoot real-world scenarios
- Complete an assessment to verify your competency

Upon passing the assessment, you'll receive a Technical Certificate, valid for two years. This certificate can be submitted to Authorities Having Jurisdiction (AHJs) as proof of your competency and authorization to install Automist systems.

3) Optional Design Training (Advanced)

For those who wish to create their own designs using the Plumis Layout Tool, an optional design module is available:

Ready to Get Started?

- a. [Register on the Plumis LMS platform](#) – Click 'Sign Up' on the homepage to create your account.
- b. [Complete the Awareness Training Modules](#) – Finish the required training in the course catalog.
- c. [Book Your Hands-On Practical Assessment](#) – Schedule your in-person session to complete your certification.
